MOBILITY FOR ALL

A Manifesto of Local Government Leaders of Asia

Our Duty for the Welfare of All - Building Sustainable Cities

We, local government leaders of Asia, are committed to the advancement of our constituent's welfare and development. We strive to build cities where people can live safely, healthily, and happily, and to achieve this, we recognize the crucial role of mobility. We believe that people are entitled to accessible, inclusive, safe, efficient, equitable, and sustainable transportation options in order to enjoy quality life in the city. We therefore declare urban mobility as an essential public good.

Urgent Action for Mobility for All

We acknowledge that our cities today continue to face challenges stemming from unequal access to mobility; a pressing concern for our constituents as our cities grow and become more dense. We also acknowledge that many other social and urban issues are deeply intertwined with mobility. Addressing present mobility gaps will help improve people's access to vital basic services, employment, and other social opportunities. Consistent with the United Nations Sustainable Development Goal 11, we recognize the urgency to radically reform transportation toward building sustainable cities and communities.

Transforming Urban Mobility - Our 5-Point Action Plan

To that end, we believe in building urban mobility systems that put people at the heart of the solution. We commit to making this a reality by taking the following actions:

Mobility as a Right - we declare mobility as a fundamental right of each and every individual. We assert that mobility is integral to other policy areas such as climate change, housing, and inclusive economic development.

Public Transportation as a Backbone of Mobility Services - we shall prioritize public transportation and will allocate the necessary urban space, resources, and legal and fiscal support to provide quality services for our constituents.

Building Safe and Walkable Residential Neighborhoods - we shall develop vibrant neighborhoods that promote walking, cycling, and other non-motorized modes. As such, we will invest in the requisite infrastructure and amenities towards this end. We will discourage the use of private automobiles to improve urban air quality and reduce traffic fatalities.

Judicious Use of Digital Technology - we shall make the most out of digital technology to improve our urban mobility systems while making sure that the user's right to privacy is never compromised.

Environmental Sustainability and Decarbonization - we commit to developing urban mobility systems that move towards lesser use of fossil fuels and overall lower carbon footprints.

Closing Statement

As leaders, we hold ourselves accountable to ensure the implementation of this 5-point action plan into concrete and contextualized policies, programs, and investments within our respective jurisdictions. We are committed to articulating measurable outcomes as a way to make clear our goals and track our progress in delivering our promise of a sustainable and more livable city for our constituents.

We believe progressive cities are ones where people from all walks of life are afforded access to high-quality public transportation and not cars. Only then can we truly achieve Mobility For All.

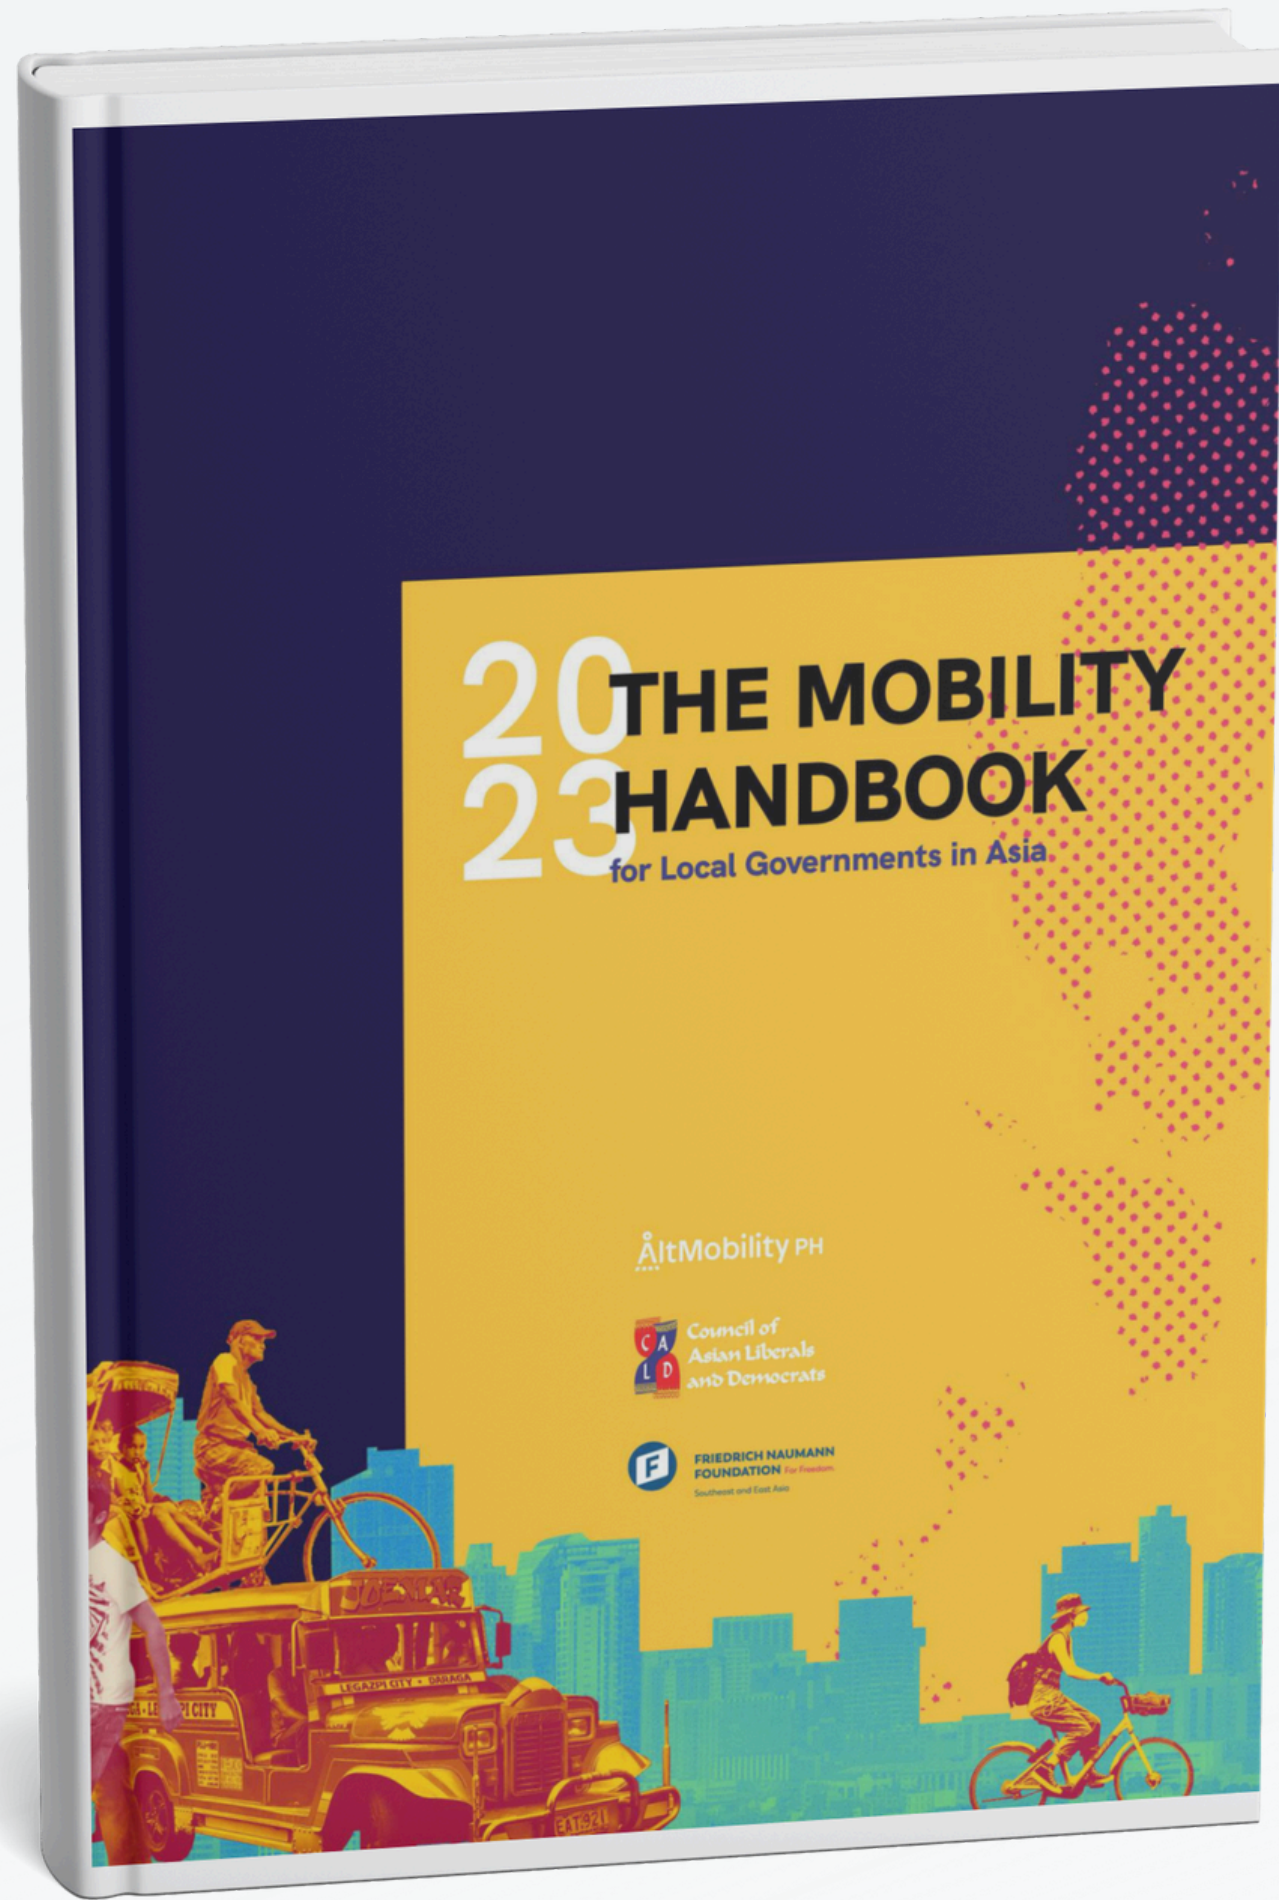

MOBILITY FOR ALL *Manifesto*

CALD SMART MOBILITY PROJECT

“Smart mobility enables people to make the best choices for transportation - enabling collaborative mobility services while increasing safety, minimizing time for commuting, decreasing the negative effects of congestion, and maximizing productivity.”

SMART MOBILITY PROJECT

In 2022, the Council of Asian Liberals and Democrats (CALD) launched the **Smart Mobility Project**, a three-year program (2022-2024) that aims to showcase smart mobility solutions in Asia and assist local government units (cities, municipalities, provinces) in their smart mobility plans.

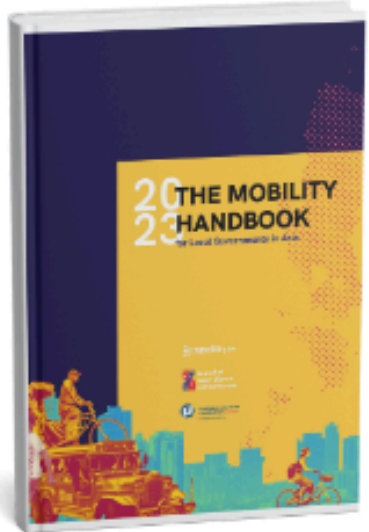

As part of its pilot activities, two workshops were organized in Tagaytay, Philippines (April 2022) and Bangkok, Thailand (September 2022), which facilitated the formation of the **CALD Smart Mobility Network**, a coalition of experts, organizations, and political parties working to provide strategic and technical guidance towards the transformation of mobility.

The vision of CALD is to help local governments assess the mobility needs of constituents, understand management challenges, explore technology and data application, and consider other transportation options, leading to the generating of a mobility plan that will serve as a guidepost towards better transportation systems.

From 2023-2024, CALD embarked in its quest to empower select local governments to radically transform mindsets and reform transportation strategies to provide the people access to safe, inclusive, and efficient public transportation.

CALD Smart Mobility Publications

A guidebook for those who are interested in transforming mobility in local communities.

Summarizes CALD workshops with transportation experts and leaders implementing smart mobility projects.
